

Correction Notice

Thursday 20 November 10:00

An error has been found in net capital stocks and gross capital stocks estimates, which affects the following Blue Book 2014 tables:

1.6.9; 3.1.9; 4.1.9; 6.1.9; 10.1; 10.2; 10.3; 10.6; and 10.10.

The CDIDs that will change are: CGRV, CGRU, CGRC, CGDA, NG23, NG26, MU7W, CGRA, MJG6, NG22, NG2A, CGDA, NG2D, NG2G, MU7X, CGUX, MKV7, NG2C, NG2I, CGRV, NG33, NG36, MU82, NG32, NG38, CGRU, NG45, NG48, MU86, CGRM, NG44, NG4A and CGRC.

ONS will correct these at the earliest opportunity and apologises for any inconvenience that this may cause.

1 Components may not sum to totals as a result of rounding.

2 Because of differences in the annual and monthly production inquiries, estimates of current price output and gross value added by industry derived from the current price Input-Output Supply and Use Tables are not consistent with the equivalent measures of chained volume measures growth given in 2.4. These differences do not affect GDP totals.

¹ The weights shown are in proportion to total gross value added (GVA) in 2011 and are used to combine the industry output indices to calculate the totals. For 2010 and earlier, totals are calculated using the equivalent weights for the previous year (e.g. totals for 2009 use 2008 weights). Weights may not sum to totals due to rounding.

² As GVA is expressed in index number form, it is inappropriate to show as a statistical adjustment any divergence from the other measures of GDP. Such an adjustment does, however, exist implicitly.

³ See footnote 2 to Table 2.3.

1 The weights shown are in proportion to total gross value added (GVA) in 2011 and are used to combine the industry output indices to calculate the totals. For 2010 and earlier, totals are calculated using the equivalent weights for the previous year (e.g. totals for 2009 use 2008 weights). Weights may not sum to totals due to rounding.

2 As GVA is expressed in index number form, it is inappropriate to show as a statistical adjustment any divergence from the other measures of GDP. Such an adjustment does, however, exist implicitly.

3 See footnote 2 to Table 2.3.

1 "Purpose" or "function" classifications are designed to indicate the "socio-economic objectives" that institutional units aim to achieve through various kinds of outlays. COICOP is the Classification of Individual Consumption by Purpose and applies to households. COPNI is the Classification of the Purposes of Non-profit Institutions Serving Households and COFOG the Classification of the Functions of Government.

2 Package holidays data are dispersed between components (transport etc).

1 Public sector is general government plus public non-financial corporations.

2 Includes the value of the land underneath the assets.

3 Formerly intangible fixed assets

4 .. indicates that data have been suppressed in this table. This is because the institutional sector and asset breakdown of non-financial corporations (S.11), into public corporations (S.11001) and private non-financial corporations (S.11PR) is unavailable from the capital stocks dataset.

1 Up until 1995/96 these payments are included in national non-domestic rates under production taxes other than on products.

2 From 1990/1991 onwards these series only contain rates paid in Northern Ireland.

3 Tax liable from banking deposits of UK residents held in Swiss banks.

4 Financial Services Compensation Scheme.

1 All data refer to end of year. Components may not sum to totals due to rounding.

2 The lower end of the range of total reserves has been calculated as the sum of proven reserves and the lower end of the range of undiscovered reserves.

3 The upper end of the range of total reserves is the sum of proven, probable and possible reserves and the upper end of the range of undiscovered reserves.

4 Expected reserves are the sum of proven reserves, probable reserves and the lower end of the range of undiscovered reserves.

5 Negative extraction is shown here for the purposes of the calculation only. Of itself, extraction should be considered as a positive value.

1 Components may not sum to totals due to rounding.

2 Includes emissions from fuel sources which are used by road vehicles (eg HGVs, LGVs, cars and motorcycles) across all industries.

3 PM10 is particulate matter arising from various sources including fuel combustion, quarrying and construction, and formation of 'secondary' particles in the atmosphere from reactions involving other pollutants - sulphur dioxide, nitrogen oxides, ammonia and NMVOCs.

4 Non-methane Volatile Compounds, including benzene and 1,3-butadiene.

1 Components may not sum to totals due to rounding.

2 The Material Flows Account has been revised to bring it into line with European regulation requirements. Further information can be found in: Improvements to UK Environmental Accounts.

3 Estimates for indirect flows are currently under development. It has not therefore been possible to include these or estimates for Total Material Requirement (direct material input + indirect flows).

4 A positive physical trade balance indicates a net import of material into the UK. This calculation of the PTB differs from the National Accounts formula (exports-imports) because flows of materials and products are considered the inverse of the flows of money recorded in the National Accounts.
